

SG#8

SG-8: Minor Actinide Data

Hideki Takano

Current status for cross section data of minor actinides such as Np and Am have been already reported by T. Nakagawa several years ago. And the integral data testing of JENDL-3.2 have been already performed for reaction rate ratios measured at the FCA-IX assembly in JAERI. This results have been also reported by Y. Kikuchi at the NEA meeting about two years ago. After that, we asked and asked at the meeting that the NEA members find and propose another available experimental data used as this integral data testing. However, until now, nobody has made any proposal and comments for the integral data. Thus, I would like to close this subgroup in this year, by writing the document for the above mentioned results.
