

"Handbook on secondary particle production and transport by high energy heavy ions" with CD ROM

Takashi Nakamura (Tohoku University, Japan) and
Lawrence Heilbronn (Lawrence Berkeley National Laboratory, U.S.A.)

A brief introduction will be presented on Handbook on Secondary Particle Production and Transport by High Energy Heavy Ions edited by us which has recently been published. The content consists of thick target neutron yield, neutron production cross sections, neutron shielding, spallation products and induced radioactivities.

The various numerical data are included in a CD ROM.
