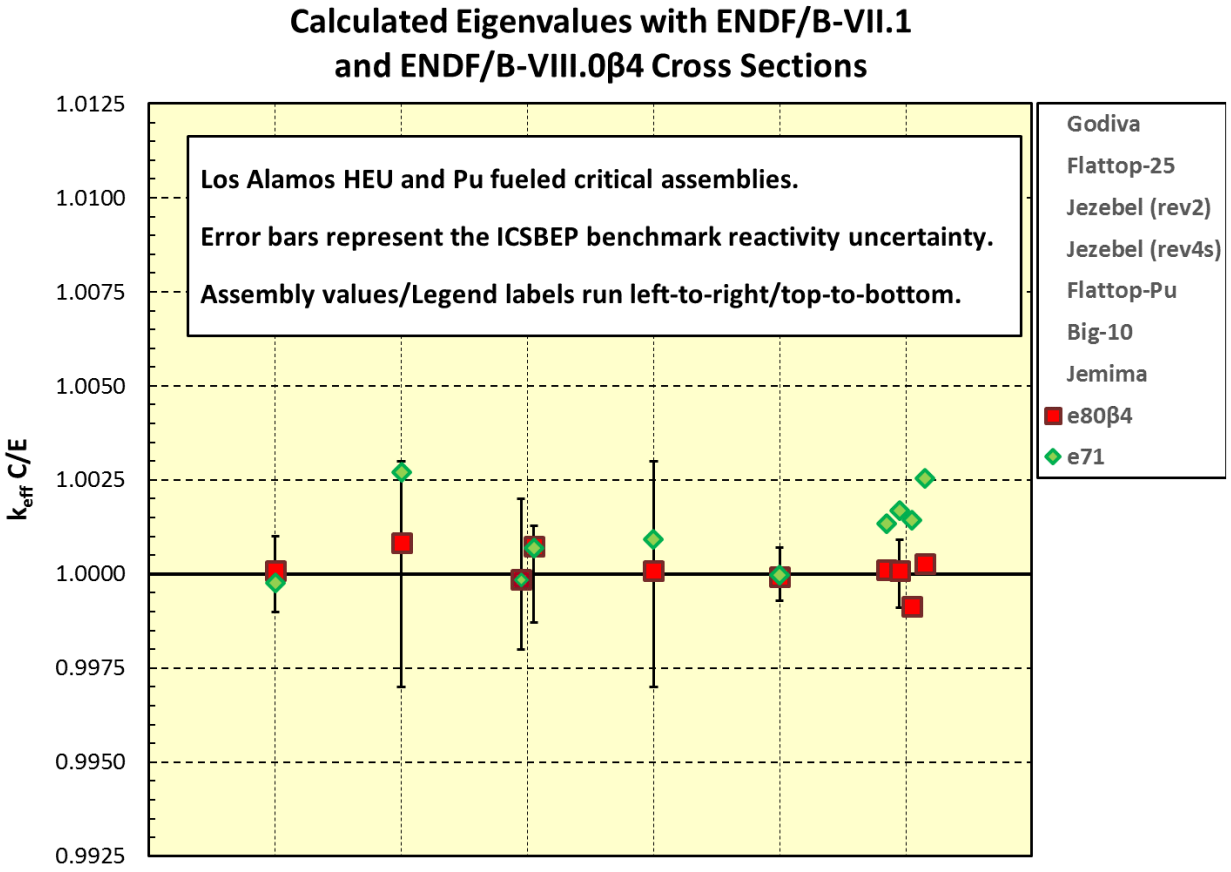
Criticality Data Testing – Legacy LANL Assemblies

- **Previous (e71) good bare assembly results are retained with e80β4 cross sections.**
- **Reflected assembly results are significantly improved.**



Summary

- **With E80β4 we have retained the good ENDF/B-VII.1 eigenvalue performance.**
- **The long-standing PST eigenvalue bias has been eliminated.**
- **Benchmarks with significant quantities of iron are calculated more accurately.**
- ***Small trends in calculated eigenvalues over large energy intervals remain (HMF7, PMF suite).***
- ***Reaction rate C/E values at high energy (e.g., n,2n reactions) remain poor.***
