

Release of data libraries and filename conventions

Arjan Koning, IAEA

WPEC-33 Meeting, May 13-14 2021, NEA, Boulogne-Billancourt

Contents

- Recent world NDL releases
- ENDF archive of IAEA
- Should we unify library releases and filenames?

Recent world NDL releases

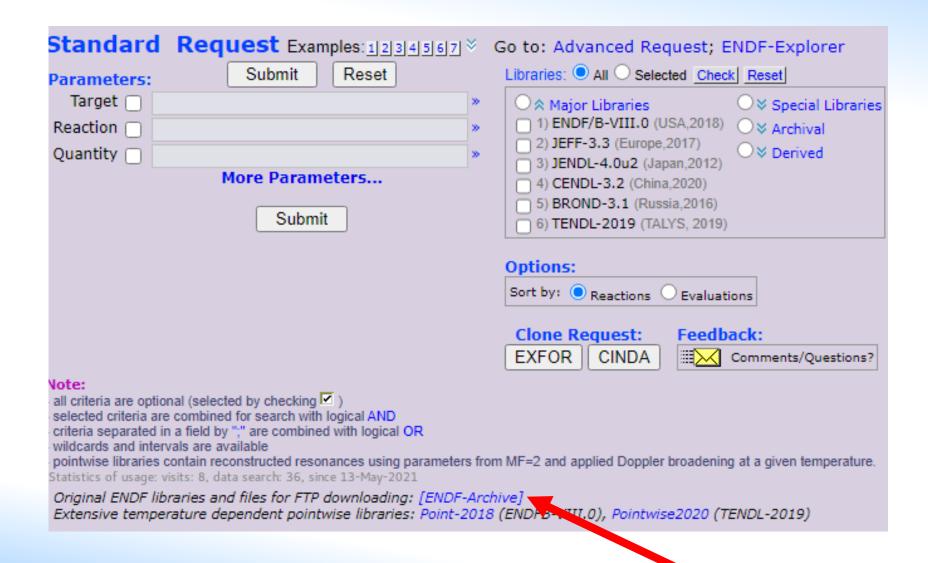

- n-CENDL-3.2.zip expands into
 - n-CENDL-3.2/CENDL-3.2/26-Fe-056.C32

95-Am-242m.C32 (09-F-019.C32)

- ENDF-B-VIII.0_neutrons.zip expands into
 - ENDF-B-VIII.0_neutrons/n-026_Fe_056.endfn-095_Am_242m1.endf
- JEFF33-n.tgz expands into
 - endf6/26-Fe-56g.jeff33*
 95-Am-242m.jeff33* (9-F-19g.jeff33*)
- jendl40-or-up_20160106.tar.gz expands into
 - jendl40-or-up_20160106/Fe056.datAm242m dat
- TENDL-n.tgz expands into
 - n-Fe056.tendln-Am242m.tendl

A valuable repository at nds.iaea.org/exfor/endf.htm

Many filenames unified (Viktor Zerkin), but still many files with mapping rules required for local application

Unify NDL releases and filenames 60 Years

- Three types of data access (?):
 - One tar file with all isotopic files for download
 - All isotopic files separately for download
 - Local use per isotopic file for plotting purposes etc (JANIS, ZVVIEW etc.)
- Examples:
 - n-endfb81.tar
 - p-tendl2021.tar
 - n-fendl33.tar
 - g-jendlpd.tar
- n-jendl40.tar expands into (should this be unified too?)
 - n/JENDL4.0/n_026-Fe-056_jendl40.endf etc.
 - And similar for any future NDL
- If general interest, the conventions need to be worked out

Why?

- Direct access for anyone doing data optimization, plotting etc:
 - n_026-Fe-056_endfb80_MT103.dat
 - n 026-Fe-056 jendl40 MT103.dat
 - n_026-Fe-056_jeff33_MT103.dat
 - n_026-Fe-056_MT103_Mannhart-22976017.exp (of course, the same convention will be used for EXFOR)
- API's
- Consistent access for AI/ML:
 - search for data trends
 - similarity of evaluations, etc. etc.

Filenames

Look at the 5 cases again:

```
95-Am-242m.C32
n-095_Am_242m1.endf
95-Am-242m.jeff33*
Am242m.dat
n-Am242m.tendl
```

- Is there, for general programming languages and databases a special significance for using '_' '-' or '.'?
- 'Protare':
 - separate projectile, target and evaluation by '_'
 - Use '-' for specification inside component
 - Use '.' only for filetype
 - n_Fe056_endfb80.endfor
 - n_026-Fe-056_endfb80.endf
 - n_026-Fe-056_endfb80.pendf
 - n_026-Fe-056_endfb80.ace
 - n_026-Fe_056_endfb80_MT103.dat

Do we care? ...or not?

Thank you!
